Proposal for

Paymid

9 November 2026 · Valid for 30 days

paymid.com → Framer migration

Fixed-price proposal to rebuild paymid.com on the Saro Framer template. Your design team handles images and visual design. We handle content, structure and pages.

1. What we found

Before quoting, we audited your current WordPress site (Elementor/UiCore theme, sitemap and public page index) and the Saro template.

46	151	18	~200
live pages	blog posts	pages in Saro	URLs to redirect

Group on paymid.com	Pages	Maps to Saro
Core: Home, Product, Pricing, Company, Contact, Get Started, Partners, Connections, Solutions Finder, Blog index, Thank you	11	Home, Pricing, About, Customers, Contact, Blog
Product / feature pages: Gateway, Smart Routing, Retry, Network Tokenization, Hosted Payment Fields, Payment Link, KYC Verification, Fraud Prevention, Currency Conversion, Dynamic Withdrawals, Customer Promotion, Process Payments, Optimize Flow, Manage Operations, Analyze Results, Expand Globally, PSP Platform	17	Product page layouts (6 included, extended into one reusable product layout)
Industries: Crypto, E-commerce, Forex, Gambling, Prop Trading, Travel · **Regions:** Europe, Asia, Middle East, North America, South America · **Partner:** B2Core	12	Solutions CMS collection + detail page
Legal: Privacy Policy, Terms & Conditions, Master Terms of Use, DPA, SLA, Editorial Guidelines	6	Privacy / Terms layout
Blog posts	151	Blog CMS collection + detail page

Excluded: test and duplicate pages we found (/paymid111/, /product-clone/). They will be redirected, not rebuilt.

> **Good fit.** Saro is built for fintech and payment products. It already has mega-menu navigation, product pages, Solutions and Blog CMS collections, plus contact and newsletter forms. That means we can reuse it instead of building custom layouts, and your site stays consistent and easy to edit.

2. Scope of work

A. Setup & information architecture

- Saro remixed into your Framer workspace. Brand colors, text styles and buttons set once in the design system.
- Sitemap and navigation agreed with you before any build. The mega menu groups Product, Solutions (industries and regions) and Company.
- Global header, mega menu, footer, CTA blocks and 404 page.

B. Page build & content migration (46 pages)

- 11 core pages built individually on the matching Saro layouts, with all existing copy migrated and sections adapted to your content.
- 17 product pages built on one reusable Framer product layout made from Saro's product pages, then filled page by page. You can add future products in minutes.
- 12 industry, region and partner pages built as a Solutions CMS collection, so your team edits them like database entries.
- 6 legal pages migrated as formatted text pages.
- Image placeholders marked with the sizes your design team needs. Current images kept wherever they still fit.

C. Blog migration (151 posts)

- Posts exported from WordPress, cleaned of Elementor markup, and imported into the Framer Blog CMS with title, slug, date, author, category, featured image and body.
- Formatting spot-checked on a sample of posts, and internal links updated to the new URLs.

D. Forms & integrations

- Contact, Get Started and newsletter forms rebuilt in Framer and connected to HubSpot, which your site already uses, or another destination you choose.
- Thank-you page, the HubSpot tracking script and GA4/GTM moved over.

E. Responsive, SEO & launch

- Every page checked and adjusted on desktop, tablet and mobile.
- Current SEO titles and meta descriptions migrated (not rewritten), plus alt text, Open Graph images and clean slugs that match the current URLs wherever possible.
- Full 301 redirect map of about 200 URLs, so you keep your Google rankings and backlinks.
- Pre-launch QA (links, forms, speed, favicon, sitemap), domain connection, Google Search Console resubmission and a 7-day post-launch check.
- Recorded handover video showing how your team edits pages, the CMS and the blog.

3. Fixed price

Work package	Est. hours	Price (USD)
A. Setup, design system, IA, navigation & footer	8	320
B1. 11 core pages	22	880
B2. Reusable product layout + 17 product pages	20	800
B3. Solutions CMS + 12 industry, region and partner pages	7	280
B4. 6 legal pages	4	160
C. Blog migration (151 posts, CSV import to CMS)	10	400
D. Forms & integrations (HubSpot, GA4/GTM)	3	120
E. Responsive pass, basic SEO, redirects, launch & handover	16	640
Total, fixed price (40 USD/h)	**90 h**	**3,600 USD**

The price is fixed: if a package takes longer than estimated, we absorb it. Hours are shown only for transparency.

Milestones

#	Deliverable	Timing	USD
1	Sitemap approved, design system, navigation, footer, Home and the other core pages on a staging link	Week 1	1,200
2	17 product pages, Solutions CMS with 12 pages, legal pages	Week 2	1,240
3	Blog migration (151 posts), forms and integrations	Week 3	520
4	Responsive pass, SEO, redirect map, launch, handover video, 7-day check	Week 4	640

> **Prefer to start smaller? Phase 1 (3,200 USD, about 3 weeks)** covers every page, forms, responsive pass, SEO and launch. The blog stays on WordPress under *blog.paymid.com* until Phase 2 (400 USD).

4. Timeline

4 weeks from kickoff, provided we have Framer workspace access, WordPress admin (or a full export) and timely feedback. Each milestone is reviewed on a live staging link.

5. Revisions & out of scope

- **Included:** two revision rounds per milestone on structure, layout and content placement.

- **Not included:** new visual design or images (your design team), new copywriting or rewriting, translations, custom code components beyond Framer's native features, custom interactive calculators, Framer plan and domain fees, and ongoing maintenance.
- Pages added beyond the 46 listed: 80 USD per standard page, agreed in writing before the work starts.

6. What we need from you

- Editor access to your Framer workspace (a paid site plan is needed for the CMS item count and a custom domain).
- WordPress admin access or a full export, and access to HubSpot and GA4.
- One point of contact for approvals, and your design team's preferred image hand-off method.

7. Framer experience & why Brightlinks

To be transparent: we do not have a public Framer site in our portfolio yet. This project is template implementation and content migration, not design, and that is the work we do every week on other builders. Recent examples: **madisonviewapartments.com** (WordPress, built from a reference design in 9 days, 5.0 review) and **jennperman.com** (custom editable Squarespace template in about 6 days, 5.0 review). Because SEO is our other core service, the migration protects your rankings with a full redirect map and your existing metadata carried over.

To reduce your risk, milestone 1 delivers the Home page and the core pages on a staging link in week 1, so you see the quality of our Framer work before most of the budget is spent.

Looking forward to working with you,
Marcos López Martínez
